

ROOSEVELT AND KING
CHAT LIKE CRONESSpend Afternoon Before
Open Grate Fire In
the Royal Palace.COLONEL GETS
ANOTHER DEGREELeaves for Stockholm After a Visit
With Vigland, the Noted
Sculptor.

CHRISTIANIA, May 6.—Another university degree was added today to the long list that already decorates Colonel Roosevelt's name, when King Frederick University gave him the honorary degree of doctor of arts. The colonel visited the university at noon, and the degree was conferred before a distinguished group of Norwegian educators.

Aside from this Roosevelt spent his last day in Christiania in what he called a reunion with his family, with whom he said, he wished to get "better acquainted." At the colonel's request several guests planned for today were abandoned.

The colonel and Mrs. Roosevelt took a long walk, during which they visited the Norwegian sculptor Vigland, who is under commission to make a statue typical of the Norwegian residents of North Dakota.

Knowing that Roosevelt was familiar with this type, the sculptor called on him for suggestions. Roosevelt urged Vigland to make the statue typical of the American.

Chat Like Crones.
Roosevelt's throat is still bothering him, and he received a second treatment from a Christiania specialist. Most of the afternoon was spent before an open grate fire at the palace, Roosevelt and King Haakon chatting like college classmates.

There is no denying the fact that Roosevelt has taken a great liking to Haakon, whom he considers to be intelligent, progressive and democratic. In side remarks the colonel has indicated that the Norwegian ruler is more nearly his own kind than any ruler he has met in Europe.

At 6 o'clock the Roosevelts left in a special train, furnished by the King, for Stockholm. They will stay aboard this train until the frontier is reached, when another special train, tendered by King Gustaf of Sweden, will take the party to Stockholm.

Rain fell most of the afternoon, but the skies cleared as the time approached for the departure and another great crowd was gathered on the streets and at the station for a farewell demonstration.

Queen Maud is Worried.
Colonel Roosevelt today showed keen interest in the condition of King Edward. Immediately on arising the former President asked for the latest news from London, and every development was carried to him as fast as word was received.

Queen Maud admitted to Mrs. Roosevelt that she was alarmed over her father's condition. It is not yet known whether the illness of King Edward will have an effect on the visit of Mr. Roosevelt to London, but it is feared that if the King's condition grows more serious Mr. Roosevelt will be compelled to abandon his trip to England, returning to America for many direct, or else merely stop in London for a few hours.

It would be out of the question for Mr. Roosevelt to be entertained officially in London while Edward lies ill. Neither the municipal authorities nor the royal family could participate.

BUILDING PERMITS

The following building permits were issued today:

To D. H. L. Brooks and Mary W. Tildenback for two-story frame dwelling, at 212 Morrison street, west; architects and builders, Brashears Brothers, estimated cost, \$3,500.

To Calvin E. King for one two-story frame dwelling at 1025 Lawrence street northeast; architect and builder, James L. Whiteside; estimated cost, \$2,750.

WILL ORGANIZE CLUB.

There will be a meeting tonight at 8 o'clock in the office of Representative C. E. Creager to organize the "Oklahoma Republican State Club of the District of Columbia." Notices of the meeting have been sent to all Oklahoma Republicans now living in Washington.

ODD FELLOWS' MEMORIAL.

Memorial services for members who have died within the last year will be held by the Odd Fellows in Odd Fellows Hall, Sunday evening, June 12. The committee of arrangements consists of W. W. Mifflin, E. T. Dunn, and F. A. Norway.

CONSTIPATION
MUNYON'S
PAW-PAWPILLS

Munyon's Paw-Paw Pills are unlike all other laxatives or cathartics. They coax the bowels into activity by gentle methods. They do not scour, they do not grip, they do not irritate, but they start all the secretions of the liver and stomach in a way that soon puts these organs in a healthy condition and corrects constipation. In my opinion, constipation is responsible for most ailments. There are thirty-two feet of human bowel, which is really a sewer pipe. When the pipe becomes clogged, the whole system becomes poisoned, causing biliousness, indigestion and impure blood, which often produces rheumatism and kidney ailments. No woman who suffers with constipation or any liver complaint can expect to have a clear complexion, or enjoy good health.

Munyon's Paw-Paw Pills are a tonic to the stomach, liver and nerves. They invigorate instead of weakening; they enrich the blood instead of impoverishing it; they enable the stomach to get all the nourishment from food that is put into it.

These pills contain no calomel, no dope they are soothing, healing and strengthening. They show the bowels to work without physic. Price 25 cents.

THE PLANET JUGGLER

By J. G. FREDERICK.

Synopsis of Chapters Already Published

A wireless operator in the tower of a New York "skyscraper" is startled by the incredibly fast sparking of his apparatus. To his astonishment, words come from the receiver of a telephone used for taking messages in the Morse code. The voice repeats two words: "Hello, Earth!" They are in Esperanto, the universal language of the time. Placing the receiver to his ear, the operator is astounded to receive a message telling him to call all the rulers of the earth together and instruct them to do as they are bid, on the penalty of having the earth dumped into the sun if they disobey. The operator is told to erect apparatus of greater power, so that communication can be secured with the voice. The man calls into consultation Elverson, an electrical expert, who, after verifying the remarkable phenomenon, completes arrangements to erect a wireless tower in pursuance with the directions of the voice.

CHAPTER II (Continued).

AFTER the scientific men had been conferring for a long time a new message came from the unknown voice. It was quite lengthy, and it gave minute electrical directions, which the experts read with intense interest. It was completely technical:

"You need exactly 28,000 per second waves. Take your regular city power current, alternating and polyphase it and quadruple-induct it, and then establish a perfect induction balance with it in a vacuum."

There followed complete instructions about getting the proper angle off the plane of the earth, at which to direct the spark; and directions for connecting and protecting the mouthpieces and receivers for communication.

The five scientific men read these words over and over again, and began to draw diagrams. After an hour of absorbing work, Kale, the telephone expert, said, with a rather flushed face:

"Gentlemen, the last dudd has been removed from the system, and the actuality of this as a message from another world than ours. The information just received gives us directions which any mechanic could follow, and makes possible wireless telephony to any part of the earth, to say nothing of the planets and stars."

"Then let's get to work at once," said Elverson, enthusiastically.

The telephone expert selected ten men from his laboratory, and they were put to work at once carrying out the instructions received. Inside of a week the work was finished, and the little group of five, together with carefully selected newspaper men, were allowed in the power room.

The world by this time was wrought up to a high pitch of excitement and expectation at prospect of communication with another sphere. It was popularly supposed that Mars was the voice being heard—that is, by those who were not still skeptical of the entire matter despite the ceaseless and mysterious interference with electric currents in both hemispheres, and the credulity of scientists who examined the messages which were still regularly repeating themselves, and were now audible in four or five of the wireless offices.

Elverson First to Speak.
It was Elverson who spoke the first words into the complicated sound condenser which served as the sending apparatus, and which set in motion the intricate series of induced currents, the final one of which ascended into space, into the infinite void which for so many thousand centuries had not given a sign of life to terrestrial creatures.

"Hello," he said.

Hardly had he ceased speaking, when a voice, perfectly audible in the remotest corner of the room, said:

"Hello! Good! Good! Good! I didn't think you'd get it finished so promptly and so accurately. I congratulate you on your ability to follow technical instructions. But please heighten your resistance just a trifle; the atmosphere conditions are not so good to-night. Your voice sounds raw and tired."

"Ah!" exclaimed Hartwell, the prominent astronomer, who was present.

"He says 'night.' That means very probably that he is speaking from a star in the southern hemisphere."

"I will save you the trouble of speculating," said the voice very promptly, showing that the speaker heard the most ordinary conversation in the room: "I am on Canopus."

The astronomer gasped, and incredulity, "Canopus is so far away that we haven't been able to measure its parallax yet!"

"It is three hundred and forty-five thousandths of a second of an arc," was the immediate response, "according to your methods of computation."

"How do you know our methods of computation and our universal language?" asked one of the scientists, who had been persistently skeptical.

"We have been able to hear conversations and discussions on the earth for the last seven years—I beg pardon—I mean, in your universal language, for ten years. But up to a short time ago I could not make my voice heard upon your earth, even though I could send it to within your reach. I was not until you perfected your wireless system that I could get my voice to your ears."

"Therefore, I have had ten years' opportunity to relate the things I saw to words I have heard used, and connect them, your words and my ideas. I can see earth objects from here better than human eyes. By the way, the dignified great man with the bald head and a small wart on his neck who has the seat near the Leyden jar table, will hurry to his factory he may help to save some of his property. It is on fire!"

The scientist and manufacturer whom the description of the fire had startled half foolish and half frightened, and undecided. We went to the telephone, and in a few minutes rushed out, crying: "It's true, gentlemen! It's true! The company was deeply impressed."

"Will you not give us more scientific knowledge which will advance civilization here on earth?" asked Elverson, respectfully.

"I can, dry laugh came from the receiving horn.

"Now that I've had a little chat with you, I am ready to talk business," as he said to be a common phrase with him. "This star, as your astronomers already know, is deficient in metallic composition. Your method of spectrum analysis places it in what you call type 'A,' with strong hydrogen lines. You can readily see, therefore, that such a metal as gold has an immense value in society on this star."

"Now, as your planet is the only one in your solar system which is inhabited, besides Mars (whose inhabitants, find, have never taken the trouble to mine gold), and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your method of spectrum analysis, to make the paraphernalia I use, and keep it in order, and in the habit of making gold, and as there are only two other inhabited stars in as much of the universe as I can see—I want your gold which you have mined, which is your
